

## Abstract

### Self-inking Hand Stamp

A self-inking hand stamp (1) with upper impact inking, comprising a stamp housing (2) in which a stamp aggregate (3) is arranged that is capable of moving from an inking position on an ink pad (4) into a stamping position, with an actuating frame (8) as well as a reversing mechanism being associated with the stamp aggregate for said purpose, whereby the actuating frame (8) is mounted like a cap on the top part of the stamp housing (2), and comprises two legs (9, 10) for actuating the stamp aggregate (3), said legs resting against the stamp housing (2), and can be depressed relative to the stamp housing (2) against spring force, and is provided with a receiving recess (17) for accommodating an information sheet (18), with a transparent cover (24) being associated with the receiving recess (17). The receiving recess (17) extends from the top side (16) of the actuating frame (8) to the broad sides (19, 20) of the frame, and the transparent cover (24) is correspondingly curved from the top side to the broad side and embodied in the form of one single piece.
